

The graph displays two curves on a grid. The red curve starts at the baseline, rises to a sharp peak at approximately x=45, then falls to a local minimum at approximately x=70, rises to a second, smaller peak at approximately x=75, and finally falls back to the baseline. The teal curve starts at the baseline, rises to a broad peak at approximately x=65, and then gradually declines. The x-axis is marked with a barcode-like pattern at the bottom.
